

Johnson & Johnson Issues Statement on September 11 Verdict in New Jersey

September 11, 2019

New Brunswick, NJ - This trial suffered egregious legal and evidentiary errors, including the inability to present key information to the jury and the striking of our entire closing argument, that required us to move for mistrial on nearly a dozen separate occasions. We will pursue an appeal of today's verdict as soon as the final phases of this trial conclude. Johnson's Baby Powder does not contain asbestos nor does it cause cancer, as multiple juries have found in recent months, and as confirmed by more than 40 years of independent scientific evaluations. Importantly, all of the verdicts against Johnson & Johnson that have been through the appeals process have been overturned.
